Cobb Agri is an independant agricultural merchant

We aim to provide the best advice on soil nutrition and fertiliser utilisation

SOIL SAMPLING

We sample over 3,500 fields annually and, through our unique record keeping and customised recommendations software (based on RB209), we provide individual fertiliser recommendations that are tailor made for the needs of the crop, soil and client.

SOLID FERTILISER

We are agents for YARA, Origin and Bunn fertiliser as well as many other suppliers. We pride ourselves on sourcing the right products coupled with market advice. We supply a large range of specialist crop products with 24 hour collection available from our store.

LIQUID FERTILISER

We are the largest independent agent for liquid fertiliser in the region and were the first in the area to trial direct injection into potato ridges. The use of placed liquid fertilisers gives greater accuracy and availability of nutrient to the crop.

We have wide ranging market intelligence and considerable purchasing power which allow us to provide competitive pricing to our clients

LIME

We closely monitor pH and apply lime to many thousands of acres annually. Our dedicated contractor network ensure an accurate and efficient service. We are fanatical about product quality and performance.

FIBROPHOS

Fibrophos is a fantastic source of phosphate and potassium enriched with other trace elements. Commonly used in both the arable and grassland sector. With Fibrophos we guarantee to reduce your expenditure, increase your soil indices and reduce workload through contract spreading.

FOLIAR FEED

Our comprehensive tissue testing programme on cereals, potatoes and maize guarantees careful monitoring of levels of plant nutrient. Cost effective solutions are available to increase plant vigour and health during the critical growing stages.
