

Farm Snapshot

- SW Herefordshire
- 410 Acres
- Beef Herd
- Grassland
- 2 Cuts Silage
- Oil Seed Rape

Case Study

Kingstone Grange

Cobb Agri began working with Nigel Winney in 2015 to improve soil nutrition. Paul Cobb visited Nigel on the farm and started by making a farm map and getting to know his intention and plans for the future.

In this review a whole farm approach was implemented where Nigel had lacked advice on how to improve soil quality and nutrition.

He had incurred unnecessary spends on phosphate. Following a comprehensive soil testing and pH programme, Cobb Agri provided a detailed document including recommendations and technical advice as to what the soil was lacking and what it needed.

Nigel says *"Over the past 3 years, I have better control over my soil indices and have started to see benefit in yield from maintaining soil nutrition."*

Cobb Agri is a very professional and friendly company who I have full confidence in. They are willing to take the extra time and care to get it right for every individual farmer and their soil needs"

“ I have started to see benefit in yield from maintaining soil nutrition ”

The main aim was to build up potash and decrease use of phosphate as soil indices were sufficient to maintain. We worked out a plan to incorporate Saltmix and Fibrophos to build long term fertility and improve palatability.

Grass yields have since increased and the cattle herd are content.
